CLIMBING

The Jump. Live.

Real-time video from freefall.

THE PROBLEM

Today the ground sees
just a dot in the sky.

THE IDEA BEHIND IT

What if the ground saw the
jump
through their eyes?

THE SYSTEM

Two devices. One live image.

SKYDIVE·LIVE

PART 1

The Transmitter

Uses the **GoPro mount**.

SKYDIVE·LIVE

Transmits 4 km — with margin.

THE RADIO HEART

The transmitter.

THE EYE

The camera.

THE POWER

The battery.

THE LINK

The **antenna.**

INSIDE

 SKYDIVE·LIVE

Every part has its **place.**

From parts to **transmitter.**

GoPro format on the helmet.

The fan knows **when.**

ALL-DAY READY

Battery swap in three steps.

One transmitter —
many **stages.**

SKYDIVE·LIVE

Several jumpers. One screen.

ONE SCREEN · THE WHOLE TEAM

Each jumper on their own channel → several receivers → **one split screen**. The whole 4-way, live, on one screen.

Why not just **DJI** or **GoPro**?

Everything that **matters.**

PART 2

The Ground Station

The image's journey.

WHAT LANDS ON THE GROUND

Live on the screen.

FIELD-READY

Set up in
minutes.

Range — with **margin.**

From the helmet to the
drop zone's **big screen.**

THE PATH

From concept to the **first**
official tests.

Join in.

Jumpers, tinkerers, drop zones —
let us build the front-row
experience.

The **link budget**, worked out.

Why the VTX **stays cool.**

The **air path** inside.
